5G SERVICES

Fixed Wireless Access Solution

Reliable access to the internet can be provided via 5G wireless networks, enabling a powerful connectivity choice for branch locations, regional offices and headquarters. For stores or outlets, enterprises will subscribe to 5G FWA as a primary circuit replacing their legacy wireline broadband service. For branches, regional offices and headquarters, companies will use wireless access for back-up or to supplement their Wide Area Network such as SD-WAN.

ENJOY HIGH-QUALITY, RELIABLE, HIGH PERFORMANCE, WIRELESS BROADBAND WITH GTT

Rich Portfolio

Alongside GTT's fixed line broadband, dedicated internet and IP transit services, GTT offers reliable broadband wireless services around the globe.

Across our broad range of Broadband Internet products, we provide a variety of access speeds and can accommodate diverse interface types, including cable, xDSL, FTTx and wireless, to meet your unique business and technical requirements.

GTT 's Broadband Internet pairs reach with efficiency. We help you to streamline your connectivity across geographies with integrated management from a global provider, including one bill, one contract and one account manager.

THE GTT ADVANTAGE

EXPANSIVE GLOBAL REACH	RELIABLE PERFORMANCE	MONITORING[1]	PREDICTABLE PRICING PLANS
GTT has relationships across the globe where they can deliver 5G FWA powered by Cradlepoint wideband adapters.	GTT deploys a device that offers both dual sim that recognizes the best performing coverage[1] as well as provides dual connectivity of 5G and 4G. If the signal weakens for 5G, the device will convert to 4G to maintain connectivity.	GTT is in a unique position as a managed service provider to monitor the 5G solution at your premise. GTT's monitoring tools will help identify sites with an unstable primary connection and transfer the customer over to the secondary SIM for reliability.	GTT provides unlimited usage plans with no overage billing providing a fixed monthly fee.
